BLÖCKER

Components and Fabrics for Pleated Blinds and Double Shades

COSIFLOR®

Pleated Blinds

In change for the environment

Blöcker goes to the market with 2 sustainable pleated blind qualities

It takes innovative ideas and environmentally conscious approaches to put our future on a good sustainable path. More and more customers are placing value on resource-saving and ecological production processes in addition to quality when it comes to their interior design. That is why Blöcker is now launching the two recycled qualities **"EvoTex"** and **"ReTex"**.

By recycling plastic and industrial waste, it does not end up in landfills or in the ocean, but experiences a second life.

With five natural trend colours each, Blöcker is taking the two recycled fabrics "EvoTex" and "ReTex" in its range.

"ReTex" consists of 100% recycled yarn. Through the targeted processing and reuse of industrial waste, the value cycle is closed and natural resources are conserved.

„ReTex“: A well-balanced combination of environmental protection and design

- 100% recycled yarn from industrial waste
- REACH certified
- Manufactured to Oekotex standard
- PVC free

Used PET bottles are the raw material for "EvoTex". The vertically structured quality is translucent and creates a pleasant atmosphere.

„EvoTex“: From plastic bottles to smart privacy and sunshade protection

- Global Recycled Standard GRS 4.0
- Carbon neutral manufacturing process
- Recycled PET bottles, REACH certified
- ISO 14001
